

IEE Mission and Governance

The Institute for Electric Efficiency (IEE) is a program of the Edison Foundation, a 501(c)(3) charitable organization. IEE's mission is to advance energy efficiency, demand response, and customer-side solutions among electric utilities; promote the sharing of related information, ideas, innovations, and experiences across the power sector; and to develop a resource base of effective business models and practices. IEE is governed by a Management Committee of electric industry Chief Executives. IEE has a permanent Advisory Committee made up of representatives of the efficiency and regulatory communities, federal and state government agencies, and other informed stakeholders. IEE also has a Strategy Committee of senior energy industry executives that identify strategies and projects for IEE.

Executive Director

- Lisa Wood
